- ◆ Compact, lightweight and portable
 - ◆ 0.96 lb., 6.6 x 4.3 x 1.25 inch
 - ◆ 435 grams, 16.8 x 10.9 x 3.2 cm

Testimonials

"In my opinion, I think the Orbit Reader 20 is just as revolutionary today, just as the slate and stylus was revolutionary back in 1820 or 1830 or so. I think the Orbit 20 is like the modern digital equivalent to the slate and stylus... a basic book-reader, and digital braille notetaker, and braille screen, display, or terminal output for our many digital devices that we all use. And its reliable and works great just as the slate and stylus is reliable and still works great for note-taking. I think Orbit Reader 20 is the most revolutionary braille device to come out in the past 200-year history of braille." [Josh Kennedy]

"The braille on the Orbit is, absolutely, period amen, the best braille I've ever seen on any display. When they say it's "signage quality", this is no marketing exaggeration hype. It really is. It's as good as any braille I've seen on any building signage. It doesn't move. Seriously. If... doesn't... move. At all. Not even a little bit. It's high and distinct and not too sharp." [Buddy Brannan]

"Get yourself an orbit! Sooner the better! Smile! It has been a long long time since I have been this impressed with a new braille display product! Darn lucky to get it too but that as they say is a whole other story. This is a dream come true for many blind and DEAFBLIND people all over the world!" [J & B]
